

« 4 per 1000 Initiative: Soils for Food Security and Climate »

Document Consortium 4-6

4th Meeting of the Consortium

Thursday December 13th, 2018

16:30 to 18:30

University of Silesia – Katowice - Poland

Roadmap for 2019 and long-term perspectives

In line with the actions carried out in 2018 by the Executive Secretariat of the Initiative, it is proposed that the following activities be undertaken during the year 2019. Some long-term perspectives are also included.

1) Continuation of the work of the Scientific and Technical Committee

a) Research orientations and scientific cooperation

- With the support of partners from the College "Research and Education Institutions" and in collaboration with CIRCASA, continue the **precise inventory of research actions currently conducted** in terms of carbon sequestration in soils and the results available to have an overall vision of research gaps and needs;
- Follow and strengthen collaboration with projects such as CIRCASA, SOCa, CaSA network and other programs, initiatives and collective projects of scientific cooperation in the field of soil carbon sequestration in order to have a **global vision of "who does what and where", to establish a thematic and geographical mapping of these partnerships** (synthesis document and mapping to be posted on the Initiative website and the collaborative platform);
- Increase the collaborative work with partners, in particular CIRCASA, on the **mapping of "hotspots"** where soil carbon sequestration potential is highest or soil carbon loss is most urgent to be tackled.

b) Work on projects evaluation

- On the bases of the procedure and the documentations elaborated and tested by the STC in 2018, **launch an international call for projects** that will be assessed with the help of the Scientific and Technical Committee and the Executive Secretariat. All positively assessed projects will be proposed to funders for support.
- Continuation of the development of **specifications for the development of a tool or adaptive further development of an existing tool** to facilitate self-assessment by project holders before consideration by the STC and to facilitate the evaluation through the STC.
- Launch of work with funder agencies, donors and organizations quality assurance in voluntary carbon markets to **mainstream the inclusion of soil carbon in existing project evaluation and certification schemes**.

c) Other works

- Continuation of the production of **synthesis documents on the scientific aspects of the "4 per 1000" Initiative**;
- **Continuation of the active contribution to the elaboration of documents concerning the implementation or the elaboration**, with the participation of the actors in the fields (farmers, foresters, etc ...) **of good practices** making it possible to increase the quantity of carbon stored in the soils, in accordance with the objectives of the "4 per 1000" Initiative;
- Active contribution to the **drafting of a global book on the "4 for 1000" Initiative**.
- Actively engage on **discussions regarding harmonization and standardization of measuring, monitoring, reporting and verifying soil carbon**, through collaboration with the Global Soil Laboratory Network of the Global Soil Partnership (GSP) and the national standards bodies of the International Organization for Standardization (ISO). In addition, promote the knowledge sharing and co-creation through country case studies on enhanced and harmonized reporting of soil carbon under the three Rio Conventions in line with national natural resource planning and management.

2) Continued work on the collaborative platform and its operation

After its official launch and effective opening on September 12th, 2018, the Collaborative Platform will have to be animated by partners with the help of the Executive Secretariat (IT-staff to be recruited) to meet the expectations of the users.

The platform will be developed along the following lines:

a) Identification of all partners in the Initiative

All **partners** of the Initiative will need to have a **descriptive sheet describing its activities and interests**, in order to enable the most efficient networking possible. The posters having been prepared for the meetings of the Consortium in Montpellier (June 2017), Bonn (November 2017), and Katowice (December 2018) will be used to feed these sheets, with the help of partners themselves.

b) Maps with geographic location of members and partners

A **mapping tool accessible from the Initiative's website** will be set up to easily locate partners and members of the Initiative and to allow contact between neighboring partners.

c) Establishment of a place for collecting information on practices

The objective will be to establish the most exhaustive **inventory of existing agricultural and forestry practices** around the world, in lines with the objectives of the "4 per 1000" Initiative. A standardized descriptive sheet inspired by the work developed in collaboration with the GSP following the GSOC 2017 or by WOCAT, will be developed including a precise description of the practice (including tutorials), its conceptual bases (field experience or scientific), the results obtained, and the areas concerned.

Ultimately, the objective will be to implement and follow up a **digital data base on good practices** according to agro-climatic areas of the world in close collaboration with

existing data bases (WOCAT and FAO for instance) and active stakeholders in that sector.

d) Development of work within each college

On the base of the work of the past meetings of the Forum, within each college of the Forum, and if validated by the actors concerned, a **list of reflections and actions to be carried out** for the preparation of the coming meetings of the Forum will be established, and a leader of the animation of these reflections will be identified.

e) Creation of the "Friends of the 4 per 1000" Group

Creation of the "Friends of the 4 per 1000" Group by **opening the collaborative platform to actors in the fields including farmers and people who support the Initiative**, which can relay the information and become true ambassadors through the animation of the group, the creation of key topics on the forum, the development of a database of information accessible to all.

3) Specific work to be done with public and private funders

In order to accelerate the outreach to donors, it is imperative that it the Initiative acts in favor of the widest possible mobilization of public and private funds to support the actions implemented by the project holders in the field. In this respect, it will be necessary to conduct the following actions, in the continuation of the work done in 2018.

a) Funders enqagement and partnerships

Although a growing number of donors are aware of the Initiative and its objectives, the **continuation of the donor awareness and fundraising campaign initiated in 2018** is key to accelerate sustainable fundraising for projects in the field. Beyond this, special attention should be paid to the expectations of these funders in terms of evaluation and project indicators.

Building a network of partnerships is one of the major key to enter funding mechanisms which are very complex and different from one organization to another. Alliance with 2nd and/or 3rd parties are strategic to build upon key common experiences and is, also, the way to involve the beneficiary country.

In general, and whenever possible, it will be pursued that donors become partners of the "4 per 1000" Initiative.

b) Seeking funding for the Executive Secretariat of the Initiative

The leadership of the Executive Secretariat is vital to the Initiative and is only possible with the allocation of funding for its day-to-day operations. Beyond the support of the members and partners of the Initiative, **support by international foundations will be sought to secure and sustain this operation** from year to year.

The Resources mobilization position is key to support the Executive Secretariat in these specific tasks. If not, the Executive Secretariat by itself has not enough resource to secure funding.

The Consortium members will be encouraged to consider a multi-party contribution to secure the creation of this position. The total cost of this position could be equally split between a defined number of members.

c) Work on taking into account the Green finance and the Carbon Markets Initiative

The **inclusion of soil carbon in carbon (offsetting) markets are a potential source of funding for the "4 per 1000" players in the field.** A reflection work based on the existing will be conducted to consider the possibility to have access to such funding mechanisms, in the continuation of the first work carried out in 2018.

d) Exploration of the possibilities and the usefulness of the creation of a foundation

The "4 per 1000" Initiative is not intended to manage funding or funds for the development of practices, projects or policies to achieve its objectives. But in the context of the two first items [a) and b)], and in order to identify a way for the "4 per 1000" Initiative to have a greater autonomy to get certain means of work, **a study on the possibility and the usefulness of the creation of a foundation will be launched.**

4) Establishment of a regional level within the Initiative

The partners and members have a particular interest in the region in which they are located. By working with the local relays they constitute, regionally specific possible actions can be identified.

a) Promotion of the Initiative

With the support of the Executive Secretariat, **each partner and member can promote the Initiative and build membership around it.** The process and the necessary documents are online on the Initiative's website. A proactive action by everyone can significantly increase its overall impact.

b) Organization of meetings at regional level

At the level of large regions (North, Central and South America, Sub-Saharan Africa, Central and Southern Africa, North Africa and Middle East, Europe, Central Asia, South-East, Oceania, etc.), the exchange of experiences, projects and knowledges could be promoted through the organization of regional forums. Synergies could be found with existing regional networks (eg. The Regional Soil Partnerships of the GSP) to build such gatherings.

The identification of voluntary local relays among partners and members of the Initiative could be a starting point for this local organization. The aim would be to organize regional forums regularly every two to three years, as it was the case in Johannesburg for the Africa continent in October 2018.

In 2019, priorities could be on the organization of such a meeting in Asia, Latin America and in the Mediterranean area. Furthermore, a partnership with already planned large regional meetings, such as the Global Soil Week in May 2019, the Eurosoil 2020 Conference or Events around the Global Landscapes Forum, should be pursued.

5) Contribution to international debates on carbon sequestration in soils

Other initiatives, programs and partnerships include promoting the sequestration of carbon in soils. It is imperative in the continuation of the work done in 2018, in order not to duplicate their respective actions, to **create synergies in participating and contributing to cross-exchanges.**

- Participation in meetings, symposia and other conferences on this subject (targeting should be done to avoid dispersal, as well as the establishment of a calendar);

- Open the meetings of the Initiative Forum to other actors thinking about joining the "4 per 1000" Initiative;
- Address the issue of exchanges and synergies to be put in place during the other statutory meetings of the Initiative (Forum, Consortium and STC).
- Promote a harmonized view among different UN agencies (e.g. FAO, UNDP, UNEP, IFAD, etc.) and the three Rio conventions (UNFCCC, UNCCD and CBD) on the topic of soil carbon sequestration.

6) Communication

In line with the actions launched or continued in 2018:

a) Development and animation of the regional correspondents' group

These are **the local relays and ambassadors of the "4 per 1000"**, based in large regions, and their roles are essential and multiple:

- Ensure a watch (strategic, sectoral, scientific, economic ...)
- Identify potential partners (research centers, companies, institutions ...)
- Encourage to support the "4 per 1000" Initiative
- Inform and guide the various potential partners and project leaders
- Receive requests and information
- Propose ideas, actions, topics, events ...
- Inform the Executive Secretariat and/or those concerned

b) The website of the "4 per 1000" Initiative

The **web site need to be maintained permanently** which means writing or rewriting the contents in French, in English and translate in Spanish, but also increase the quantity and quality of information on-line, etc. Permanent search of information and keep in touch with key resource people is also vital for the enrichment of the web site.

Develop French, English and Spanish media watch and news related to the "4 per 1000", and update information available on the web site.

c) "4 per 1000" Newsletter

Continuation of the publication of the newsletter in French and English, and launching, according to available means, of the newsletter in Spanish. Development of relationship with regional "Ambassadors" in order to increase the amount of information and news from various regions of the world.

Possible work on the graphic design of the newsletter (according to means available)

d) Development of press relations

Regular contacts with medias and journalists are indispensable for the general awareness about the Initiative. Development of press relationship will be facilitated by the followings:

- Creation and writing of a press kit
- Writing and sending Press Releases
- Identification of actions in the field and people able to respond according to different angles of treatment
- Identification of "turnkey" topics (angle, images, interlocutors)
- Creating key messages
- Update of the francophone media database
- Relations with journalists

e) Presence of the "4 per 1000" Initiative on social networks

It is essential to **integrate the presence of the Initiative on social networks** in a global action plan to ensure in particular a coherence and synergy of the different messages and information.

- LinkedIn: developing the created page
- Creation of a Facebook page to reach a wider audience
- Twitter and Instagram in a 2nd time

Ability to create online events:

- Chat
- Video-conferencing
